ABOUT ME

Senior Full Stack Software Developer & Team Lead with 6+ years of experience architecting scalable web platforms and AI-driven systems. Proven expertise in NestJS, Laravel, and React, with a focus on modernizing legacy infrastructure and integrating high-impact AI capabilities like vector-based matching and automated moderation. A results-oriented leader who has reduced operational costs by up to 70% while mentoring engineering teams to deliver elegant, high-performance solutions that align technical architecture with complex business goals.

SKILLS

Backend: Nest.js, Express.js, Python FastAPI, PHP Laravel
Frontend: React, Next.js, Vue.js, TALL Stack (Alpine.js, Livewire, Tailwind)
Databases: MongoDB, PostgreSQL, MySQL, Redis, Memcached
Search & Data: Meilisearch, TypeSense, Redis Vector Search, Sphinx
AI / Machine Learning: Hugging Face Transformers, fast.ai, Semantic Matching, Content Moderation Models
Real-Time Systems: Socket.io, SSE, Redis Pub/Sub, Pusher
DevOps & Cloud: AWS, DigitalOcean, Vercel, Docker, PM2, CI/CD, Laravel Forge

OPEN SOURCE & LIBRARIES

nest-sse — NestJS Server-Sent Events Utility
A lightweight, high-performance library for implementing real-time unidirectional data streaming in NestJS applications.
Link: <https://www.npmjs.com/package/nest-sse>
Use Cases:

- Real-time AI model token streaming (e.g., ChatGPT-style response typing).
- Live system monitoring dashboards and notification feeds.
- Low-overhead status updates for long-running background processes.

EXPERIENCE

Lead Full-Stack Developer — DA STUDIO
Dubai
February 2023 — Present
Key Skills: Microservices, Monorepo, Event-Driven Architecture, Vector Search, Test Driven Development, AI Tools Integration, MongoDB Aggregation Optimization, CI/CD Pipeline Automation.

- Designed high-performance search systems using Meilisearch and Sphinx improving query response times and content discoverability.
- Implemented Redis caching and optimized database queries reducing backend latency and improving overall application performance.
- Led modernization efforts including framework migrations and backend architecture improvements for legacy systems.

- Reduced Time to Interactive (TTI) by architecting a code-splitting strategy and leveraging React Server Components for heavy data fetching.
- Improved Core Web Vitals and SEO performance by eliminating layout shifts, optimizing asset delivery, and reducing render-blocking resources.
- Managed CI/CD pipelines using GitHub Actions with automated testing, deployment workflows, and AWS infrastructure provisioning.
- Conducted code reviews, mentored developers, and coordinated backend architecture decisions across multiple product teams.
- Integrated APM and monitoring solutions for production systems enabling performance bottleneck detection, error tracking, and infrastructure health monitoring.

Full-Stack Developer — IT FAQ

Dubai

August 2022 — February 2023

Key Skills: Redis Caching, Next.js (ISR/SSR), Payment Gateway Integration, Docker Containerization, Modular Software Architecture, Legacy System Refactoring.

- Built and maintained scalable backend services using NestJS and PostgreSQL, delivering swagger documented REST APIs.
- Implemented TanStack Query background refetching to maintain real-time data freshness and a reactive client-side experience.
- Integrated payment systems including Stripe and PayPal with subscription management and webhook processing.
- Refactored legacy APIs into modern modular architecture improving maintainability and development speed.
- Participated in CI/CD pipeline implementation using GitHub Actions integrating automated testing, deployment workflows.

Full-Stack Developer — HET

Istanbul

March 2021 — April 2022

Key Skills: React.js SPA, Vue Composables, MySQL Indexing, Nginx, Reverse Proxy, CDN, Background Job Processing, Frontend Performance Optimization, SEO Technical Audit

- Optimized rendering performance by implementing virtualization for large datasets and strategic memoization to minimize reconciliation overhead.
- Implemented background jobs and cron-based automation for system notifications and maintenance tasks.
- Architected a modular form system in Vue.js using Composables, improving overall UX consistency.
- Enhanced data integrity in Vue for complex multi-step form validation and error state management.
- Optimized database queries, indexing strategies and memory-efficient data access patterns improving application performance.

EDUCATION

Bachelor in Computer Engineering

Karabük University, Karabük

LANGUAGES

English, Turkish, Arabic

PROJECTS

Monlogement — Real Estate Management Platform

Property listing platform featuring advanced search capabilities and AI-powered property recommendations.

Technologies: Laravel, Meilisearch, Mapbox, Redis Pub/Sub, FastAPI, fast.ai

- Implemented advanced search filtering across geographic regions using Meilisearch.
- Deployed AI recommendation system using collaborative filtering with content-based metadata.
- Built automated GeoJson points transformer pipeline reducing manual transformation workload.
- Build batch processing system for agencies large ads importing through FTP.

Blindlove — Anonymous Dating Application

Anonymous dating platform implementing AI-powered user matching using vector embeddings and semantic profile analysis.

Technologies: NestJS, Socket.io, MongoDB, Redis Vector Search, Hugging Face Transformers

- Implemented Redis Vector Search for semantic profile matching improving match relevance.
- Designed hybrid matching algorithm combining weighted filters and vector similarity search.
- Built scalable real-time infrastructure supporting chat, notifications, and matchmaking services.

Roomco — Real-Time Social Platform

Real-time social networking platform with chat features and AI-powered moderation tools.

Technologies: NestJS, Socket.io, MongoDB, FastAPI, Redis Pub/Sub

- Led migration from Express.js to NestJS improving code structure and maintainability.
- Implemented AI-powered image moderation using FastAPI and machine learning models.
- Built scalable real-time messaging infrastructure supporting thousands of concurrent users.
